SERVICES DIVISION INDICATIONS JOURNAL

9 May 1955

1. Formosa Straits - Economic - Communications
(Info Date - May 1955)

Further exploitation of aerial photography reveals a second radio installation near Chin-chiang. This is of a size comparable to those previously reported at Foochow.

This brings the total of observed new installations in the Formosa Straits area to four, two near the airfield at Foochow and two near the airfield at Chin-chiang.

Comment: The report of a new radio installation at Amoy, mentioned in Journal Item #2, 29 Apr 55, was based on a transmission error and should have read Chin-chiang instead. No new radio installations have yet been observed at Amoy.

The new installation is directionalized toward Formosa, as are the other three. Since these installations are all near newly constructed airfields, the Photo Intelligence Division has been requested to give special attention to the areas around new airfields along the Formosa Straits.

Source: S/COM analysis of existing photographs with D/GP and D/I APOIN 204.
